SUMMARY

DevOps engineer with 5 months of internship experience building and maintaining 16+ CI/CD pipelines for Angular and ASP.NET Core applications. Experienced in Windows/Linux infrastructure, automation, monitoring, and security incident response, with hands-on AWS projects and Linux homelab experience.

EXPERIENCE

DevOps Intern *Feb 2026 – June 2026*
Teknoloje Solutions *Karachi, Pakistan*

- Designed and maintained **16+ CI/CD pipelines** for Angular 19 and ASP.NET Core 8 applications, integrating **GitHub** and **Gitea** through a synchronization workflow automated with **PowerShell** and Task Scheduler.
- Provisioned and hardened a **Windows Server 2025** production environment, configuring **IIS**, **SQL Server 2025**, and .NET hosting bundles for application deployment.
- Detected and mitigated an active **SMB/RDP brute-force attack** involving **2,659+ failed attempts from 20+ IPs**, implementing firewall rules, lockout policies, and **WireGuard VPN for secure remote access**.
- Diagnosed and resolved **SQL Server connection-pool exhaustion** on a production VPS using a SQL Server Agent cleanup job and logon trigger, stabilizing service operation under load with no data loss.
- Deployed self-hosted **Gitea** with **role-based access control (RBAC)** for 15+ developers and migrated its database backend from **SQLite** to **Microsoft SQL Server**.
- Developed a **PowerShell-based FTP backup engine** that automated infrastructure backups and eliminated more than **5 hours of manual work per week**.

TECHNICAL SKILLS

Cloud: AWS (EC2, S3, VPC, IAM, Route 53, ALB, Auto Scaling, CloudWatch)
CI/CD & Version Control: Git, GitHub Actions, Gitea, Jenkins
OS & Containers: Linux, Windows Server, Docker, Docker Compose, Kubernetes, IIS
Scripting & IaC: PowerShell, Bash, Python, Terraform, Ansible
Monitoring, Security & Databases: Prometheus, Grafana, WireGuard, UFW, Trivy, SQL Server, PostgreSQL

PROJECTS

MAS-Simulator Queueing Theory Engine *GitHub | Live Demo*

- Provisioned AWS EC2 with **Terraform/Ansible**, automated Next.js builds and Docker Hub publishing via **GitHub Actions**, and configured **Prometheus/Grafana**, reducing deployment time to under **5 minutes**.

Linux Homelab: Infrastructure & Monitoring *GitHub*

- Built a self-hosted **Ubuntu Server 24.04** homelab with SSH key-based access, **UFW** firewall hardening, and **Docker Compose** deployments for Flask and PostgreSQL; verified database backup restoration and configured **Prometheus/Grafana** monitoring.

AWS CI Pipeline: Flask App *GitHub*

- Built a GitHub-triggered **CodePipeline/CodeBuild** workflow that runs **pytest**, builds a non-root **Docker** image, and pushes it to Docker Hub tagged with the commit SHA; credentials stored in **SSM Parameter Store** with a least-privilege **IAM** policy.

CERTIFICATIONS

IBM: DevOps Engineering Professional Certificate **AWS:** Cloud Quest: Cloud Practitioner (Training Badge)

EDUCATION

BS in Computer Science, UoK (UBIT), **Co-Lead** AWS SBG; Core Member, **CNK** *Jan 2023 – Dec 2026*
